right) \ times 100 (% \) We enter the 14% APR at 0.14. You should invest \$4,100 from next month for six months to fund (pay for) solar panels. How much do you want to invest today to fund your graduate school if your investment earns 6% a year? â Again, we see the relationship between present and future value. Click here to: Class 3 operation: Compounding monthly A€ 4F ""The present value or future value (lump sum) Annuities are one of two broad types of cash flows (see concept map 4) that we encounter in the business. The real income in the year 5 A` \$55,249. First convert the annuity into a lump sum using the PVA formula. With the value of the money time, we will organize the cash flows according to the number, size and time, which we will illustrate on a timeline. Now we want to see the kinds of problems that might occur where we would use cA² that we learned. In technical terms (TVM), the \$1,210 we calculated from the \$1 are called the ä 6
